

High Hill

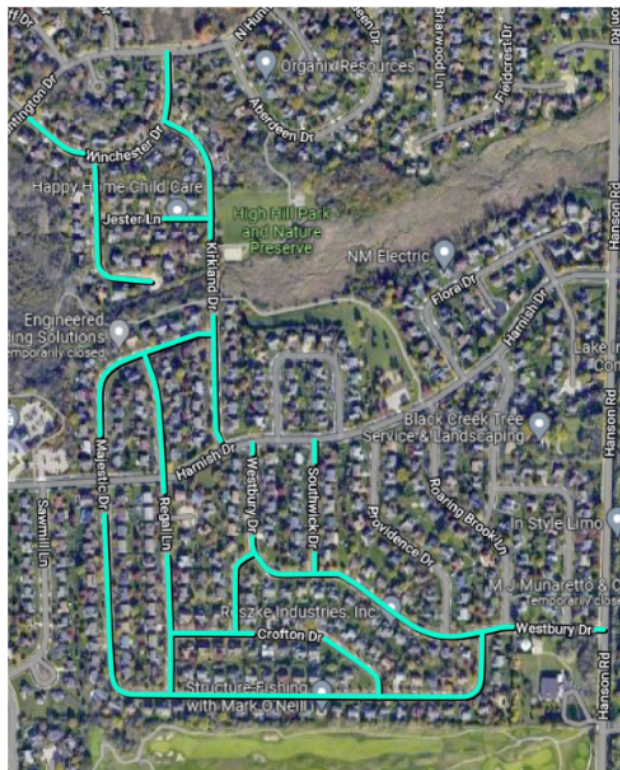

Subdivision Improvements Project

Construction Update - September 17, 2022

The underground contractor continues the storm sewer repairs throughout the subdivision. These repairs are necessary to ensure the underground infrastructure is in good condition and functioning properly.

Over the next few weeks, the contractor will continue saw cutting the sidewalk driveway aprons and curb and gutters at various locations. The saw cuts are the first step in the process. The next step, which will begin next week, is the contractor will remove and pour new concrete. This work is currently focused south of Harnish Drive.
